PFAS_Memorandum_Miami_Beach_Commissioners____Final____ (2).docx;

Hi Ricardo,

Thank you for taking the time to speak with me before Sutnick hour today . I've attached an electronic copy of the memo I provided to you, as well as the most recent City of Miami Beach Water Quality Reports [here](#) and [here](#). The water as described in the water quality reports as "Excellent" and "Safe" is neither, but actually extreme dangerous characterized by the EPA as follows <https://www.epa.gov/pfas/our-current-understanding-human-health-and-environmental-risks-pfas> :

What We Know about Health Effects

Current peer-reviewed scientific studies have shown that exposure to certain levels of PFAS may lead to:

- Reproductive effects such as decreased fertility or increased high blood pressure in pregnant women.
- Developmental effects or delays in children, including low birth weight, accelerated puberty, bone variations, or behavioral changes.
- Increased risk of some cancers, including prostate, kidney, and testicular cancers.
- Reduced ability of the body's immune system to fight infections, including reduced vaccine response.
- Interference with the body's natural hormones.
- Increased cholesterol levels and/or risk of obesity.

The public, especially children and pregnant women should be alerted that tried and true water filtration such as reverse osmosis and ion exchanged can be implemented at home for < \$1 per day (e.g. culligan.com provider NSF certified in whole home, under sinks and more) - reducing PFAS by 99%). I am available to discuss anytime.

Best Regards,

Gregory J. Rigano, Esq.
