Just want you guys to know I am never going away. Ignoring me will not help. You can not continue to tell people the water is safe and excellent and show imagery of children drinking it. You cannot blame the county for this, it is the City of Miami Beach Water Quality report. This is tortious on its face.

There is literally nothing stopping you from telling people the water is really bad which is provably is and to get filtration, especially targeting children and women. This is called a FOREVER CHEMICAL because it persists forever (does not break down) and accumulate in the body, food chain and environment.

It is invisible. Miami Beach does not need another park to play soccer. It needs good leadership to protect children. It needs databases to track cancer rates, thyroid disease, birth issues, children development issues (all proven health issues from the EPA due to PFAS exposure).

1776 American Revolution was led by lawyers. You are elected and appointed leaders the City of Miami Beach relies on, step up and do the right thing.

On Mon, Jun 8, 2026 at 11:54AM donatelo rigano <donatelo.rigano@gmail.com> wrote:

Why does City of Miami Beach get significantly more contaminated PFAS water than what Miami Dade services its own residents?

Miami Dade PFOA level is 16 ppt

Miami Beach PFOA level is 30 ppt

Notably, in the recent Sutnick hour where I spoke, Mayor Meiner stated that Mr Norris is a resident of North Miami Beach. In my meeting with him and Amy in December 2025 Mr Norris said he drinks straight from the tap and the water is excellent. North Miami Beach has its own water filtration including reverse osmosis which filters out 99% + of the PFAS chemicals. In addition North Miami Beach has their own drinking water council.

City of Miami Beach must have its own drinking water council set up immediately, alert the public and should bring suit against Miami Dade for lying to us and giving us highly contaminated water. Mr Norris is obviously overwhelmed just trying to keep the city's pipes from exploding and properly serviced. He clearly needs help. This is not acceptable that wealthy people and celebrities can get perfectly filtered water and poor people cant afford it and get lied to.

I am preparing significant efforts to commence soon and I would like to protect the kids and pregnant women of Miami Beach immediately. I am volunteering to help - this is not something that should be ignored for which to date it has been largely ignored. It is the single most important issue in Miami Beach - 75% of your body is water, we are all full of this military grade contamination. Cancer levels are rising, this needs to end immediately. There MUST be a City of Miami Beach drinking water council.

There are proven solutions.

On Wed, Feb 4, 2026 at 1:01 PM donatelo rigano <donatelo.rigano@gmail.com> wrote:

Hi John and Amy,

Please escalate and the following is very important, very much a breakthrough for miami beach water that does not require treatment.

I recently obtained PFAS testing reports for the Miami-Dade Northwest Well Field from MDWASD at my own expense (attached is the most recent report), and the data show that PFOA and PFOS levels in those wells are on the order of

1–2.3 ppt for PFOA and 0.4–2.0 ppt for PFOS, with the highest observed values being 2.3 ppt PFOA and 2.0 ppt PFOS. By contrast, the Miami Beach water quality report shows PFOA/PFOS concentrations around 30 ppt, which is more than an order of magnitude higher than the concentrations measured in the Northwest Well Field production wells themselves. The Miami Beach water is coming from right around the Miami Airport!!!!

The w

Miami-Dade County Wellfield Protection Areas

This is a map of the water supply wells, with the one all the way to the west being the Northwest Well Field, whereas City of MB gets its water from the wells right by the airport, within 1 mile from there, and highly contaminated.

Here is an image of a plane crash in 2022 from ABC at MIA airport. This white fire fighting foam known as AFFF historically has used PFAS chemicals from the 1970s onwards.

The only reasonable explanation for this discrepancy is that the wells located in and around the airport wellfield are contaminated from fire fighting foam just like almost every airport in the country, and that contamination is being drawn into the system and delivered eastward, while the wells located to the west of the airport are comparatively clean. **Groundwater in this area flows predominantly from west to east, which means that wells situated west of the airport sit upgradient of the contamination plume and therefore are not impacted in the same way as the airport-adjacent wells.**

Operationally, this has a very straightforward implication: simply shutting down or throttling the contaminated airport-area wells and relying only on the cleaner wells located to the west of the airport would be expected to reduce the

PFOA/PFOS load in finished water by approximately tenfold, and potentially even more, based solely on the observed concentration differences between the wellfield data and the 30 ppt levels seen at Miami Beach. Importantly, this risk-reduction strategy does not require any new PFAS treatment infrastructure; it relies only on optimized wellfield management and hydraulics, and could be implemented immediately as a low-cost, high-impact mitigation step to protect public health while longer-term treatment solutions are designed and deployed.

Please contact me to discuss further. I am going to start discussions with Miami Dade shortly as well.

Hi John and Amy,

Following up here to previous message. As presented, it looks like the water city of Miami Beach is buying is coming from the County of Miami Dade wells very close to the airport (see below) which is ground zero for the PFAS fire fighting foam contamination, which is likely why its highest by the airport.

Is there any update on getting the water report for chemical contamination levels at each [well in Miami Dade](#)? Specifically the wells to the west are likely very clean and uncontaminated (e.g. Northwest Wellfield) [because according to Miami Dade website, the water travels east \(not west\) so the water to the west would likely be uncontaminated as it is west of the airport](#). Basically in the well map below, the water in the aquifer travels from left to right. New York city had this issue 125 years ago and they decided to get the water from 50 miles away in the cat skills mountain area. In our case, its just a few miles away at an already active well.

Think of the children as according to the EPA children are highly vulnerable to PFAS ("forever chemicals") due to higher intake per body weight, developing systems, and behaviors like crawling/mouthing objects, leading to risks like developmental issues, immune harm, and cancers, with exposure sources including food, water, dust, and breast milk.

At 30 ppt the water you are serving is very dangerous to children, all according to the EPA. So while the EPA is not making you clean it up right now, they are certainly not telling you to claim the water is excellent, safe and show pictures of a child smiling drinking the water (City of Miami Beach Water Quality Report does this which is a copy of the water report from Miami Dade). [In fact EPA actively is stating at these levels this water is dangerous especially for children](#). The people must be alerted to this issue. Schools should be filtered and parents should be alerted immediately.

On Wed, Dec 24, 2025 at 1:10 PM donatelo rigano <donatelo.rigano@gmail.com> wrote:
Hi John and Amy,

Thank you for meeting with me. Attached is the presentation.

As discussed, here is the link from EPA that states what water filters can be used to remove PFAS from the tap: <https://www.epa.gov/sciencematters/reducing-pfas-drinking-water-treatment-technologies>

Notably it states the following: " High-pressure membranes, such as nanofiltration or reverse osmosis, have been **extremely effective at removing PFAS.**"

Additionally, here is also EPA link which states the dangers of PFAS to children not just firefighters exposed as discussed - <https://www.epa.gov/pfas/our-current-understanding-human-health-and-environmental-risks-pfas>

Feel free to search around (google, chat gpt, [perplexity.ai](https://www.perplexity.ai) is good for academic research w/ proper citations) the vast amount of peer reviewed **evidence** which shows significant impacts to children, pregnant women and sensitive populations at the PFAS levels the City and County are serving water.

Lastly, I highly recommend updating the 2024 water report that has not been issued yet by the City of Miami Beach (but has been by the county) including but not limited to remove the terms that refer to the water being served as "excellent" and "safe" and also delete pictures of children drinking water. The longer you wait, the more legal risk increases (e.g. Failure to warn, negligent misrepresentation, etc.). Would also warn the public re PFAS levels and use the exact EPA language re .004 ppt, .02 ppt for pfoa pfos, 4 as target MCL and the miami county levels of 30 ppt and higher for the last 5 years or so ...)

Blessings to you all and happy holidays. I am available to discuss further any time.

From the EPA last link above:

Our Current Understanding of the Human Health and Environmental Risks of PFAS

What We Know about Health Effects

Current peer-reviewed scientific studies have shown that exposure to certain levels of PFAS may lead to:

- Reproductive effects such as decreased fertility or increased high blood pressure in pregnant women.
- Developmental effects or delays in children, including low birth weight, accelerated puberty, bone variations, or behavioral changes.
- Increased risk of some cancers, including prostate, kidney, and testicular cancers.
- Reduced ability of the body's immune system to fight infections, including reduced vaccine response

Children

Because children are still developing, they may be more sensitive to the harmful effects of chemicals such as PFAS. They can also be exposed more than adults because:

- Children drink more water, eat more food, and breathe more air per pound of body weight than adults, which can increase their exposure to PFAS.

Hi John and Amy

It would be great to meet in person to discuss this matter further. Are you available before the holidays by any chance? There are likely relatively easy solutions that can be implemented quickly. Thank you.

Gregory Rigano

Miami Beach, FL

On Wed, Dec 3, 2025 at 5:38 PM Knowles, Amy <AmyKnowles@miamibeachfl.gov> wrote:

Good evening Commissioner Suarez and Mr. Rigano,

Thank you for sharing this information. The City of Miami Beach purchases its potable water from Miami-Dade County, which adheres to both federal and local requirements. PFAS is indeed a complex and pressing issue, and as new regulations are instituted, Miami-Dade County will need to address them accordingly. It's important to note that the City doesn't have its own potable water quality treatment system.

I'm also copying John Norris, our Public Works Director, in case you need any additional information regarding this matter.

Best regards,

Amy Knowles

Got it.

Thank you for sending this over and for including the screenshot. I've CC'ed our Environmental Director on this so the team can review the PFAS information and the suggestions you raised.

Best,
David Suarez
Miami Beach City Commissioner

On Tue, Dec 2, 2025 at 5:51 PM donatelo rigano <donatelo.rigano@gmail.com> wrote:

it is coming from the airport (MIA) and miami beach buys its water from miami dade. its just in the miami beach annual water report which is copy and pasted from miami dade

<https://www.miamibeachfl.gov/wp-content/uploads/2024/10/CMB-Water-Quality-2023.pdf>

i screen shotted it here which is the bottom of page 8 of 20 of the water quality report. reverse osmosis gets it out over 99%. its a simple technology that miami beach should install for its residents:

2023 ADDITIONAL CONTAMINANTS MONITORING**					
PARAMETER	FEDERAL MCL (a)	FEDERAL GOAL (b)	STATE MCL	YEAR TESTED	MAIN SYSTEM
Perfluorooctane sulfonate (ppt)	N/A	N/A	N/A	23 (h)	38 (ND-38)
Perfluorooctanoic acid (ppt)	N/A	N/A	N/A	23 (h)	30 (ND-30)

On Tue, Dec 2, 2025 at 3:08 PM Commissioner David Suarez <david@davidsuarezmb.com> wrote:

Donatelo,

Can you please clarify where you're seeing this and how you know the PFAS level is 30? I want to make sure I fully understand the source of the information so I can look into it immediately.

Thank you for bringing it to my attention.

David Suarez
Miami Beach City Commissioner

On Tue, Dec 2, 2025 at 9:56 AM donatelo rigano <donatelo.rigano@gmail.com> wrote:

the drinking water is cancer causing with PFAS levels at 30. the epa states anything above 4 is really really bad and you are serving this unfiltered to children and pregnant women

On Tue, Dec 2, 2025 at 8:03 AM David Suarez <david@davidsuarezmb.com> wrote:

From Meridian to Alton Road, we're fixing problem lights across the city.

Dear Miami Beach Neighbors,

I hope you all had a wonderful Thanksgiving. We have a lot to be grateful for as a community — including the fact that people from all over the world choose Miami Beach as their destination. Their visits help support our local businesses and keep our economy strong. But with that popularity comes one thing we all feel: **traffic**.

And with **Art Week (December 1–7) now here**, we're already seeing an increase in visitors, events, and activity across the city. To help manage the additional volume, the City has expanded trolley service, activated dedicated shuttle routes, and brought back the Miami–Miami Beach water taxi. You can find more details [here](#).

While the city manages the Art Week surge, I've also been working closely with our Transportation Department on everyday fixes you'll feel on your daily routes.

Free Art Week shuttles and water taxi routes connecting Miami and Miami Beach.

Your Feedback Is Making a Real Difference

Earlier this fall, I asked residents to share which traffic issues were affecting their neighborhoods. I read every comment and immediately followed up with Transportation Director Jose Gonzalez. Thanks to your feedback, we've already completed several improvements across Meridian Avenue, Alton Road, and the Fisher Park area.

Meridian Corridor Signal Fixes You Helped Identify

Here's what has already been completed:

- Shortened side-street green lights that were triggering with no cross-traffic.
- Repaired pedestrian buttons that stopped traffic unnecessarily.
- Extended north/south green time to move more cars through each cycle.
- Fixed faulty vehicle detection equipment causing long red cycles.
- Adjusted timing near Lincoln Road to reduce peak-hour backups.
- Repaired the 17 Street detector, eliminating recurring delays.

Alton Road & 15 Street

Residents notified us that the pedestrian signal here was activating automatically even without pedestrians present — causing unnecessary red lights. The issue has now been resolved.

Pilot Project: Thermal Sensors at Delaware Ave

At the Fisher Park intersection, residents raised concerns about constant pedestrian recalls. We're now moving forward with **passive thermal pedestrian detection** — a technology requiring no physical interaction and respecting Sabbath observance while improving traffic flow.

This will be the **first installation of this technology anywhere in Miami-Dade County**. A demonstration was completed, and we are preparing the documents required for County approval.

Help Us Catch Issues Quickly

If you notice a traffic light that seems off or out of sync, simply **reply to this email**. Every report helps us make targeted, meaningful improvements.

With Art Week already underway, please plan your travel around peak event times when possible. In my next newsletter, I'll share updates on **traffic signal synchronization** and expanded access to **HOV/Express lanes** — two long-term improvements that will make a real difference.

Thank you for your continued feedback and trust. Together, we're keeping Miami Beach moving.

Warm regards,
David Suarez
Miami Beach City Commissioner
